**M.Sc. in HEALTH PROFESSIONS EDUCATION PROGRAM**

In the modern era, Health Care systems worldwide face new challenges that call for new responses. The Health Professions Education has to reach beyond the mere teaching and learning of health sciences, rather it must be made relevant, efficient, effective and responsive to societal needs and aspirations. Over the last 16 years, the Department of Medical Education (DOME) of J. N. Medical College, Belgaum has been a pioneer in this direction. It has conducted a number of workshops on Educational Technology and Research Methodology for various streams of health professionals including eleven International Workshops in collaboration with the Department of Medical Education (DME) of the College of Medicine, University of Illinois at Chicago (UIC), USA. Established in 1959, the DME of UIC is the oldest such department in the world and has been in the forefront of training and mentoring educational leadership in countries across the world. The World Health Organization has designated UIC-DME, USA as a collaborating center for education with emphasis on leadership development.

With the establishment of the KLE University (KLEU) in 2006, DOME has been upgraded as the University Department of Education for Health Professionals (UDEHP). It is the endeavor of KLEU-UDEHP to develop human resources in the health professions to meet these new challenges and aspirations of the community in the new millennium. UDEHP has conducted a number of educational training programs for the health professionals since its inception in the year 2007.

The national agencies responsible for prescribing policy and regulating higher education including professional education in India such as the University Grants Commission, Medical Council of India, Dental Council of India, All India Council for Technical Education, Pharmacy Council of India, Nursing Council of India and Rehabilitation Council of India have advocated the need for developing human resources in the domain of health professions education. However, at present, the training opportunities are limited to workshops and fellowships. What is lacking is a full-fledged Masters Program that will enable comprehensive training of faculty of health professional educational institutions. It is in this context that KLEU-UDEHP in collaboration with UIC-DME, USA with their vast experience and commitment to the development of Educational Leadership, have launched the Masters in Health Professional Education (MHPE) program.
